

AI Management Analyst

Project Brief & Proposal

Advanced portfolio project modelling an AI-assisted management analysis workflow for a multi-channel B2B company. The objective is to combine structured KPI data with a controlled AI reasoning layer that identifies exceptions, explains likely business drivers and converts analysis into management actions. AI output is treated as decision support, not autonomous decision-making.

Objective	Design an AI-assisted management intelligence workflow
Management cycle	Monthly
Duration	15 business days
Project value	1.350 € + VAT

1. Business Need

Management receives financial, sales, customer and pipeline KPIs, but the interpretation process remains manual and inconsistent. Significant changes may be visible in the data without being translated quickly into a clear management question, explanation or action.

The project is designed to create a repeatable AI-assisted analysis layer that reviews defined KPIs, detects material exceptions, structures management hypotheses and produces a concise decision brief for human review.

2. Required Inputs

A structured monthly KPI dataset, agreed KPI definitions and targets, prior-period values, management thresholds, customer or channel dimensions where relevant, business context notes and a list of decisions the management team routinely needs to make.

3. Scope of Work

The scope covers KPI architecture, exception rules, AI analysis workflow, evidence requirements, management brief structure, human validation controls and a pilot management cycle.

Workstream	Purpose	Output
KPI architecture	Define trusted management measures	KPI dictionary
Exception logic	Identify material deviations	Alert rules
AI analysis	Summarize patterns and likely drivers	Insight layer
Evidence control	Separate data facts from hypotheses	Confidence framework
Decision support	Translate insights into management questions	Action brief
Governance	Require human review and traceability	Control checklist

4. Operating Principle

The AI layer does not replace the underlying data model and does not make autonomous commercial or financial decisions. Every management insight must be traceable to defined KPI values or clearly marked as a hypothesis requiring validation.

Sensitive or confidential information should be handled only within an approved data environment and according to the organization's access and privacy requirements.

5. Timeline

Days 1-3: KPI definitions and management questions. Days 4-6: exception thresholds and analysis logic. Days 7-10: AI-assisted insight workflow and management brief. Days 11-13: validation and governance controls. Days 14-15: pilot cycle and final recommendations.

6. Deliverables

Management KPI Dictionary, Exception & Alert Framework, AI Analysis Workflow, Evidence & Confidence Rules, Monthly Management Brief Template, Human Review Checklist and Pilot Management Analysis.

7. Fee & Terms

Project fee: 1.350 € + VAT. 675 € + VAT at assignment and 675 € + VAT at final delivery. One consolidated revision round and a final review meeting up to 60 minutes are included.

Excluded: production AI software development, model training, API or cloud costs, enterprise data integration, cybersecurity assessment, automated execution of management actions and legal or regulatory compliance advice.
