

New Market Entry & Commercial Expansion

Final Deliverable - Market Entry Decision

Advanced portfolio analysis modelling a market-entry decision for a Greek B2B services company. Assumptions are internally consistent and are used to demonstrate the decision framework, commercial modelling and execution logic.

Recommendation	GO - Cyprus first
Attractiveness score	84 / 100
Year 1 revenue target	154.000 €
Launch budget	24.000 €

1. Executive Decision

The recommended first expansion market is Cyprus, with an attractiveness score of 84/100. Romania ranks second at 73/100 and Bulgaria third at 67/100.

Cyprus provides the strongest combination of commercial accessibility, language and business familiarity, manageable launch complexity and fit with a remote-first B2B delivery model. The recommended route is a lean six-month validation phase using direct sales plus selected local partnerships, without establishing a permanent office initially.

84/100	24K €	154K €	6 months
Market score	Launch budget	Year 1 target	Validation phase

2. Market Selection

The scorecard weights market accessibility, demand potential, competitive intensity, commercial fit and operating complexity. Cyprus leads because the model can be tested with comparatively low fixed commitment and a short feedback cycle.

Criterion	Cyprus	Romania	Bulgaria
Demand potential	82	86	72
Accessibility	92	66	70
Competitive position	78	72	68
Commercial fit	88	76	65
Operating simplicity	83	65	63
Weighted score	84	73	67

3. Priority Customer Segment

The first target is established SMEs with 10-75 employees that already purchase external professional services but lack a fully developed internal capability. The segment is attractive because decision cycles are shorter than enterprise procurement and project value can support remote delivery.

The initial value proposition should focus on measurable commercial improvement and execution support rather than broad consulting language.

4. Entry Model

A hybrid entry model is recommended: direct founder-led/business-development outreach for control of messaging and learning, combined with a small number of referral or implementation partners for local credibility and access.

No local office is recommended during validation. A permanent presence should only be reconsidered after recurring monthly revenue exceeds 18.000 € for three consecutive months and the qualified pipeline remains above 60.000 €.

Channel	Role	Year 1 revenue share
Direct outreach	Target accounts and discovery	45%
Referral partners	Warm introductions and credibility	30%
Inbound / content	Authority and demand capture	15%
Existing network	Cross-border introductions	10%

5. Commercial Economics

The Year 1 target is 154.000 €. The model assumes a gradual ramp rather than immediate scale, with monthly revenue reaching approximately 27.000 € by Month 12. The launch budget is capped at 24.000 € during the validation phase.

Commercial break-even is expected once monthly market-specific revenue consistently exceeds approximately 11.500 €, assuming the lean operating structure is maintained.

Commercial KPI	Target
Qualified opportunities / month by M4	12+
Proposal conversion	30%+
Average initial engagement	2.400 €+
Partner-sourced pipeline	25%+
Monthly revenue validation threshold	11.500 €+
Gross margin	55%+

6. 90-Day Go-to-Market Roadmap

Days 1-30 - Validate: finalize target-account list, localize messaging, build a 60-account prospect universe, approach potential referral partners and run initial discovery conversations.

Days 31-60 - Convert: expand outbound activity, issue first proposals, test offer and pricing, document objections and activate two to three qualified partners.

Days 61-90 - Decide: assess conversion, project economics, pipeline quality and delivery capacity. Continue only if the agreed decision gates are met.

7. Key Risks & Controls

The main risks are weak pipeline creation, price compression, over-reliance on one partner and premature fixed-cost expansion. Controls include a capped launch budget, diversified acquisition channels, monthly margin review and no permanent local cost base during the first validation period.

Risk	Trigger	Control
Weak demand	< 8 qualified opportunities/month	Refine segment and proposition
Low conversion	< 25% after 10 proposals	Review pricing and sales process
Margin pressure	Gross margin < 50%	Rescope offer and delivery
Partner concentration	> 40% pipeline from one source	Add direct and alternative channels
Cash exposure	Launch spend > 24.000 €	Pause non-essential expansion spend

8. Final Recommendation

GO - CYPRUS FIRST. Proceed with a six-month lean validation phase using a hybrid direct-sales and partner-led model. Do not establish a permanent office at launch.

Continue beyond validation only if monthly market-specific revenue reaches at least 11.500 €, proposal conversion is at least 30%, gross margin remains above 55% and qualified pipeline supports the next 90 days. If two or more thresholds remain below target for two consecutive review cycles, pause expansion and revise the proposition before committing further capital.
