

Financial Performance & Cash-Flow Intelligence

Project Brief & Proposal

Advanced portfolio engagement modelling a financial performance diagnostic for an established B2B services company. The objective is to connect P&L performance with cash-flow behaviour, break-even requirements and management scenarios so that profitability and liquidity can be managed together.

Objective	Build a decision-ready financial performance and cash-flow view
Analysis period	12 months
Duration	12 business days
Project value	1.050 € + VAT

1. Business Need

The business is profitable on an annual basis, but monthly cash availability is uneven. Management needs to understand which parts of the P&L create or absorb cash, how much revenue is required to cover the operating cost base and what actions would strengthen liquidity without relying only on additional sales.

The project therefore combines profitability analysis with cash-flow intelligence rather than treating accounting performance and liquidity as separate management topics.

2. Required Inputs

Twelve months of revenue and operating-cost data, gross margin information, payroll and fixed operating costs, customer payment terms, supplier commitments, opening and closing cash balances, receivables, planned investments and management assumptions for the next operating period.

3. Scope of Work

Financial performance review, margin analysis, cost-base structure, monthly cash-flow movement, working-capital pressure, break-even analysis, scenario modelling and management actions.

Workstream	Analysis	Output
P&L; performance	Revenue, gross profit, EBITDA and margin	Financial performance view
Cost structure	Fixed and variable operating costs	Cost-base diagnostic
Cash flow	Monthly inflows, outflows and closing cash	Liquidity view
Working capital	Receivables and payment timing	Cash-conversion insight
Break-even	Required revenue and margin sensitivity	Break-even threshold
Scenarios	Downside, base and improvement cases	Decision framework

4. Timeline

Days 1-2: financial data structure and assumptions. Days 3-5: P&L, margins and cost-base analysis. Days 6-8: cash-flow and working-capital review. Days 9-10: break-even and scenario modelling. Days 11-12: management recommendations and final review.

5. Deliverables

Financial Performance Diagnostic, Monthly Cash-Flow View, Cost and Margin Analysis, Working-Capital Review, Break-even Model, Scenario Comparison, KPI Framework and 90-Day Cash Improvement Plan.

6. Fee & Terms

Project fee: 1.050 € + VAT. 525 € + VAT at assignment and 525 € + VAT at final delivery. One consolidated revision round and a final review meeting up to 60 minutes are included.

Excluded: statutory accounting, tax advice, audit work, financing applications, bookkeeping, treasury execution and ERP implementation.
